Admin Dashboard API Integration Guide

This document provides the mapping for the newly implemented global Admin APIs. All endpoints require an Authorization: Bearer <token> header with a user possessing the **Admin** role.

1. Dashboard Overview

Section: Main Landing Page (Home)

[GET] /api/v1/admin/overview

Aggregates global stats for the primary dashboard cards and the activity feed.

Response Payload:

```
{
  "appointments_today": 42,
  "total_doctors": 156,
  "recent_activity": [
    {
      "id": "uuid",
      "user_name": "Dr. John Doe",
      "user_avatar": "https://...",
      "event_description": "Appointment Scheduled",
      "timestamp": "2024-03-05T10:00:00Z",
      "status": "completed"
    }
  ],
  "storage": {
    "used_gb": 124.5,
    "total_gb": 1000.0,
    "percentage": 12.45,
    "files_count": 3420
  },
  "alerts": [
    {
      "id": "1",
      "title": "Storage Warning",
      "message": "Storage reaching 80% capacity",
      "severity": "high"
    }
  ]
```

```
}
```

2. Account Management

Section: Manage Accounts / User List

[GET] /api/v1/admin/accounts

Dumps all active and inactive accounts globally across all organizations.

Response Item:

```
{
  "id": "uuid",
  "name": "Jane Smith",
  "email": "jane@example.com",
  "role": "doctor",
  "status": "active",
  "organization_name": "City General Hospital",
  "last_login": "2024-03-01"
}
```

[PATCH] /api/v1/admin/accounts/{id}

Edit credentials or status for a specific user.

Request Payload:

```
{
  "name": "Updated Name",
  "email": "newemail@example.com",
  "role": "admin",
  "status": "inactive"
}
```

Note: Setting status to "inactive" performs a soft-delete.

[DELETE] /api/v1/admin/accounts/{id}

Global revocation of a pending invite or deactivation of an active user.

3. Appointment Management

Section: Global Appointments Dump

[GET] /api/v1/admin/appointments/all

Fetches a master list of all appointments system-wide.

Response Item:

```
{
  "id": "uuid",
  "requested_date": "2024-03-06T14:30:00Z",
  "status": "accepted",
  "reason": "Routine Checkup",
  "doctor_name": "Dr. House",
  "patient_name": "Patient Zero",
  "organization_name": "Princeton Plainsboro",
  "created_at": "2024-03-01T09:00:00Z"
}
```

4. Clinic Management

Section: Organization Stats Table

[GET] /api/v1/admin/organizations/stats

Returns aggregated staff and patient counts for every clinic/hospital.

Response Item:

```
{
  "organization_id": "uuid",
  "organization_name": "Hope Medical Center",
  "active_staff_count": 12,
  "total_patient_count": 450
}
```

5. Admin Settings & Profile

Section: Admin Profile / Settings Page

[GET] /api/v1/admin/settings

Fetches current admin profile, organization info, and system settings.

Response Highlights:

```
{
  "profile": {
    "name": "Master Admin",
    "email": "admin@system.ai",
    "avatar_url": "[https://storage.link/](https://storage.link/)..."
  },
  "organization": { "name": "System Org", ... }
}
```

[PATCH] /api/v1/admin/settings/profile

Update the logged-in admin's own name or email.

Request Payload:

```
{
  "name": "New Admin Name",
  "email": "admin-new@system.ai"
}
```

[POST] /api/v1/admin/settings/avatar

Upload a new profile picture.

Request: - Content-Type: multipart/form-data

- Body: file: <Image Binary>

Response:

```
{
  "message": "Avatar updated",
  "preview_url": "https://..."
}
```

Hospital & Department API Documentation

This document outlines the new endpoints added to support hospital department management and administrative doctor onboarding. All endpoints expect a standard `Authorization: Bearer <token>` header.

1. Get All Hospital Departments

Fetches a list of all clinical departments currently registered under the hospital's organization.

- **URL:** `/api/v1/organization/departments`
- **Method:** `GET`
- **Auth Required:** Yes (Any logged-in user)

Request Parameters:

- None

Success Response (200 OK):

```
{
  "departments": [
    "Cardiology",
    "Neurology",
    "Pediatrics",
    "General Surgery"
  ]
}
```

2. Get Doctors by Department

Fetches a list of all active doctors belonging to a specific department within the current organization.

- **URL:** `/api/v1/doctors/by-department`
- **Method:** `GET`
- **Auth Required:** Yes (Any logged-in user)

Query Parameters:

- `department` (string, required): The exact name of the department to filter by.
  - *Example:* `/api/v1/doctors/by-department?department=Cardiology`

Success Response (200 OK):

```
{
  "results": [
    {
      "id": "123e4567-e89b-12d3-a456-426614174000",
      "name": "Dr. Sarah Jenkins",
      "specialty": "Interventional Cardiology",
      "photo_url": "[https://s3.amazonaws.com/](https://s3.amazonaws.com/)...",
      "department": "Cardiology",
      "department_role": "Head of Department"
    }
  ]
}
```

3. Create Doctor Account (Admin/Hospital)

Allows a hospital administrator to directly create a new doctor account. This will automatically encrypt their PII data and send an email to the doctor containing their login credentials.

- **URL:** `/api/v1/hospital/doctor/create`
- **Method:** `POST`
- **Auth Required:** Yes (Requires `hospital` or `admin` role)

Request Payload (JSON):

```
{
  "email": "dr.smith@hospital.com",
  "password": "SecurePassword123!",
  "name": "John Smith",
  "department": "Neurology",
  "department_role": "Senior Consultant",
  "license_number": "MED-987654321"
}
```

Success Response (200 OK):

```
{
  "message": "Doctor account created successfully. Credentials have been sent to their email.",
  "doctor_id": "123e4567-e89b-12d3-a456-426614174001"
}
```

Error Responses:

- `400 Bad Request`: "A user with this email address is already registered."
- `400 Bad Request`: "A doctor with this license number already exists in the system."
- `403 Forbidden`: "You do not have permission to create doctor accounts."

4. Update Doctor Profile (Admin/Hospital)

Allows a hospital administrator to edit an existing doctor's profile. You only need to send the

fields you wish to update; omitted fields will remain unchanged.

- **URL:** `/api/v1/hospital/doctor/{doctor_id}`
- **Method:** `PATCH`
- **Auth Required:** Yes (Requires `hospital` or `admin` role)

Path Parameters:

- `doctor_id` (UUID): The unique ID of the doctor to update.

Request Payload (JSON): *(All fields are optional. Only include what needs changing)*

```
{
  "name": "Dr. Jonathan Smith",
  "department": "Neurology",
  "department_role": "Head of Neurology",
  "specialty": "Pediatric Neurology",
  "license_number": "MED-987654321-RENEWED"
}
```

Success Response (200 OK):

```
{
  "message": "Doctor details updated successfully.",
  "doctor_id": "123e4567-e89b-12d3-a456-426614174001"
}
```

Error Responses:

- `404 Not Found`: "Doctor not found in your organization."
- `400 Bad Request`: "Another doctor in the system is already using this license number."
- `403 Forbidden`: "You do not have permission to edit doctor accounts."
